

Topological Sort

Definition: Topological sort is a linear ordering of the vertices of a directed graph such that for every directed edge $U \rightarrow V$ vertex u comes before v in the ordering.

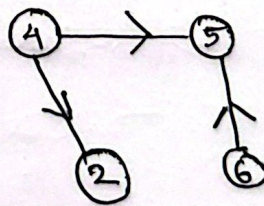

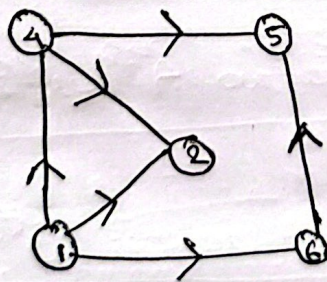

Key Points:

- ① It is defined only for Directed Acyclic Graphs (DAGs)
- ② If a graph has a cycle, topological sorting is not possible.
- ③ Commonly used to represent dependency relationships.

☐ Start with node which end degree is 0.
